How-To-Document Resource:
How to verify if the VPN is connecting to the ESC network.
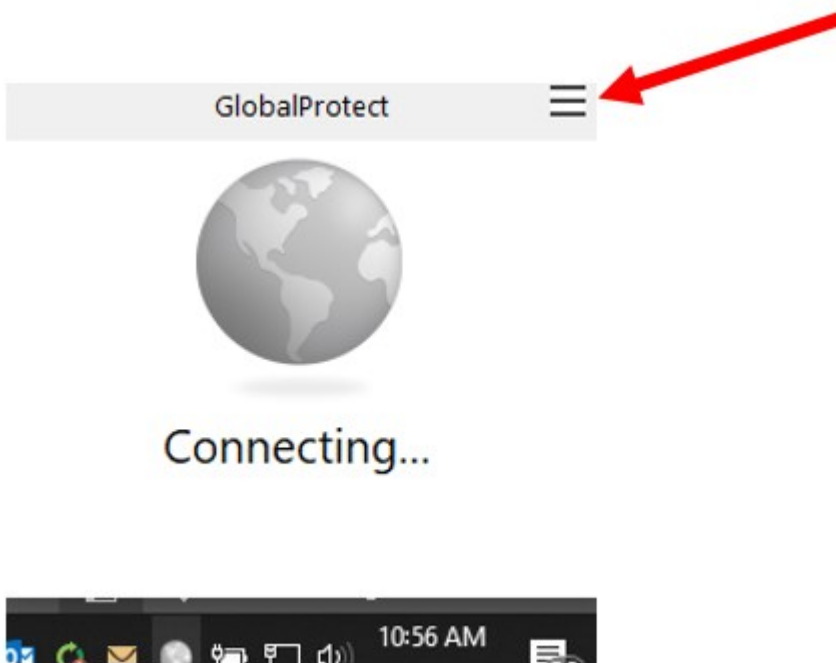

Verifying the VPN software is connecting to the TCESC network.

All laptops must be running the GlobalProtect VPN software to maintain a secure network connection and receive the necessary updates and settings.

To verify the GlobalProtect VPN software is running and connected...
Verify if the GlobalProtect VPN software icon is gray with a red warning symbol

If not connected, click on icon, click on the 3 bars and the select the option to connect from the dropdown menu.

Note: you may receive a prompt to verify your account. If so, enter your device username and password. If "tcesc\" is listed in your username field, delete it...just name and password is required.
